

Albright International

The SW802 is a single pole double throw contactor designed for use in telecommunication and power distribution applications where an uninterrupted load is switched. These contactors are primarily for use with Direct Current loads but can also be used with Alternating Currents.

Performance data provided should be used as a guide only. Some d from figures may be necessary according to application.

- Thermal current ratings stated are dependant upon the size of cond
- For further technical advice email: technical@albrightinternational.c
- Albright reserve the right to change data without prior notice

Uninterrupted current - no or infrequent load switching requirements (maintains lower contact resistance).

The SW802 features double breaking main contacts with silver alloy tips which are weld resistant, hard wearing and have excellent conductivity. Silver plating on the main contacts is standard for the SW802, however, optionally it can be excluded from the specification. This compact contactor can be busbar mounted vertically or horizontally, but if mounted vertically, the coil should be at the bottom. If the coil is required at the top, we can adjust the contactor to compensate for this. Optional extras include auxiliary switches, brackets, coil finishes and magnetic latching which allows the contactor to remain closed while consuming no coil power.
