

ED300 Single Pole Single Throw On/Off (Part of the Emergency/Combined Disconnect Series)

The ED300 range of switches have been designed to provide a rapid means of disconnecting batteries or other power supplies in the event of serious electrical faults. Whilst the switches are primarily intended for use with battery powered vehicles they are also suitable for use with static power systems. All types are capable of safely rupturing full load battery currents in the event of an emergency.

a da da es

Uninterrupted current - no or infrequent load switching requirements (maintains a lower contact resistance).

The ED300 is a manually operated device with an over-centre spring mechanism which provides a snap action for both opening and closing of the main contacts. The ED300 is easy to install (see drilling details) and is secured with supplied M5 posidrive mounting screws. Lockable versions feature a key which is necessary for the knob to be moved from the "Off" position to the "On" position. Once in the "On" position, the key can be removed. Thereafter, the knob may be depressed to the "Off" position where it will automatically lock and remain locked until the key is used again to unlock it. The ED300 is fully serviceable with genuine replacement parts available.

Precautions:

When fitted with magnetic blowouts the polarity marked on the contact housing must be observed when connecting the main terminals. Ensure that the switches are installed in a position where heavy arcs emanating from the switch cannot damage or electrically jump across to adjacent parts. The switch is to be used to rupture current in an emergency or as a no-load isolator.

Do not use as a regular On-Load Switching Device.

Application	Uninterrupted	Dimensions in mm [inches]	FOR LOCKABLE TYPES	
Thermal Current Rating (^I th)	300A		'L' KEYS (SET OF TWO)	
Intermittent Current Rating:		¢58[2,28] →		
30% Duty	550A			
40% Duty	475A			
50% Duty	425A		\$120	
60% Duty	385A			
70% Duty	360A			
Overload Currents that can be Ruptured:				
ED300	1000A at 48V D.C.			
ED300B	1000A at 96V D.C.			
Maximum Recommended Contact Voltages (Ue):		TO BE TIGHTENED WITH RANGE 8.5-10Nm		
ED300	48V D.C.	N'C PERO NC		
ED300B	96V D.C.			
Typical Voltage Drop per pole across New Contacts at 300A	30mV	62[2,44]		
Mechanical M.T.B.F	>10 x 10 ³		48 [1.89]	
Operating Ambient Temperature	- 40°C to + 60°C			
Guideline Contactor Weight:				
ED300	400 gms	6.3mm [0.25] SPADE 15.7 0 15.7 0 15		
With Auxiliary	+ 20 gms			
With Blowouts	+ 50 gms		Ø25 [Ø0.98]	
With Lock	+ 60 gms		Drilling Details for Mounting

Auxiliary Thermal Current Rating	15A		
Auxiliary Contact Switching Capa	bilities (Resistive Load):		
	15A at 24V D.C.		
	10A at 48V D.C.		
	5A at 96V D.C.		
Advised Connection Sizes for Maximum Continuous Current			
Cable to be rated suitable to Applicat	tion		

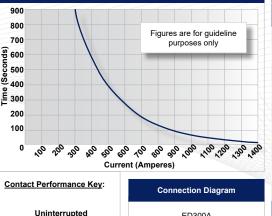

Note: Where applicable values shown are at 20°C

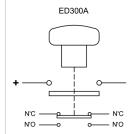

The Use of Battery Disconnecting Switches in **Electric Vehicles**

Modern battery powered electric vehicles are inherently very reliable and safe. However, even when sophisticated electronic controllers are used it is desirable to have a means of disconnecting the battery in the event of an emergency, such as a vehicle failing to stop or an electrical short circuit.

In many countries it is mandatory to fit one or more devices to achieve an emergency disconnection of the battery

- Performance data provided should be used as a guide only. Some de-rating or variation from figures may be necessary according to application
- Thermal current ratings stated are dependent upon the size of conductor being used
